DETAILED ACTION

1. This application is in condition for allowance except for the following formal matters:

Figure 8 is objected to because element 4 (OFDM modulation circuit) should be labeled as 41 (OFDM demodulation circuit) as described on page 18 of the specification. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance. Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire TWO MONTHS from the mailing date of this letter.

Allowable Subject Matter

2. Claims 10-18 are allowed.

The following is an examiner's statement for reasons for allowance.

3. Claims 10-18 are allowable over the prior art of record since the cited references taken individually or in combination fail to particularly teach or fairly suggest modulating an OFDM signal by using the clock and window signal generated by a first window signal serving as a reference signal and converting frequencies of the OFDM signal so that a

carrier interval between adjacent channel becomes a whole multiple of the carrier interval in each OFDM signal. It is noted that the closest prior art of record, Ikeda et al. (US 5506836) shows generating a clock and a time window signal for demodulation of and OFDM signal. However, Ikeda et al. fails to suggest converting frequencies of the OFDM signal so that a carrier interval between adjacent channel becomes a whole multiple of the carrier interval in each OFDM signal

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - US Patent (6856590) to Okada et al. describes modulating the center frequency of the OFDM signal (figure 12; column 10, lines 39-58).
 - US Patent (5506836) to Ikeda et al. describes generating a clock and a time window signal for demodulation of an OFDM signal (figure 3, column 12, lines 26-38).
